Project 1 Extra Credit Consideration

Throughout the first half of the Spring 2023 semester, Professor Byron Hoy stated that extra credit for the Project 1 submission could be earned for professionalism, extra effort, and overall presentation. For extra credit, I submitted a project binder containing all of the paper submissions for Project 1, a PowerPoint presentation for my Java program, and a written documentation for my Java program. Along with this, I provided a Works Cited page for my Git Workflow essay, published all sources used in my GitHub repository and Javadocs, and created a professional Javadocs that can be generated in my Java program.

The project binder I submitted has labeled tabs to navigate to the desired content as easily as possible. It also provides a title page and a table of content page. My goal with the project binder was to act as though I was submitted a project report for my supervisor. This project binder contains everything that I done for Project 1 and presents itself in a professional manner.

The PowerPoint presentation I submitted is a walkthrough of my code, along with learning outcomes and a slide dedicated to the sources I used. It also highlights the difficulties during the development of the Java program. The goal with the PowerPoint presentation was to act as though I was presenting my Java program to my supervisor or client. It is designed to be easy to understand for someone with no background in technology. It also contains screenshots of the program various outputs.

The written documentation for my Java program is the written version of my PowerPoint presentation. It is written as though I was submitted it along with my Java program to my supervisor or client. The written documentation is a walkthrough my code and pictured the outputs that it generates. It is written to be easily readable for anyone, including those with no background in technology.

In my Git Workflow essay, I included a Works Cited pages with sources formatted properly in APA format. I also published all sources used during the development of my Java program in the Javadocs and GitHub. I believed it is necessary to properly credit any sources that I received information from.

Overall, I learned a lot from creating this project. Not only did I further my coding skills, I learned soft skills like creating documentation, creating professional looking code, presenting my project in a professional manner. I put a ton of work in this project and turned it in as though I was turning in a project for my employer. I hope it shows. Thank you.
